

# Uncovering coordinated networks on social media

## Summary

 The framework is broadly applicable to uncover coordination on different social media platforms

 5 case studies of Twitter data from diverse contexts: U.S. elections, Hong Kong protests, the Syrian civil war, and cryptocurrency manipulation

 Coordination is found using multiple behavioral dimensions (content, activity, identity, etc.)

## Method

1. Behavioral trace extraction
2. Bipartite network construction
3. Projection onto account network
4. Cluster analysis

# Network analysis of behavioral traces can uncover coordination among social media users
