

SIGNLENS : A Tool for Analyzing Polarized Social Relationship Based on Signed Graph Modeling

Junjie Huang^{1,2}, Huawei Shen¹, Xueqi Cheng¹

1.CAS Key Laboratory of Network Data Science and Technology, Institute of Computing Technology, Chinese Academy of Sciences, Beijing, China

2.University of Chinese Academy of Sciences, Beijing, China

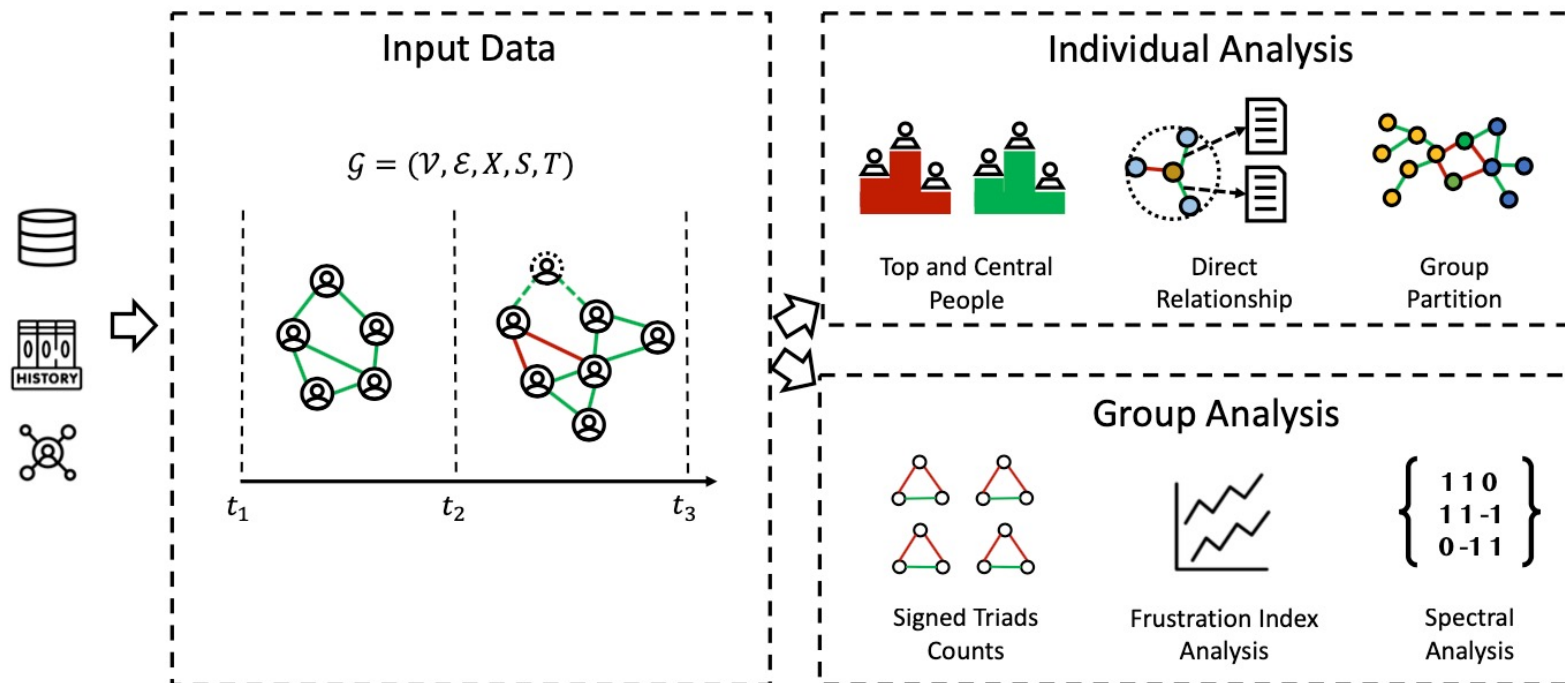

Figure 1: The illustration of the proposed SIGNLENS . SIGNLENS contains individual analysis and group analysis. The individual analysis will visualize the relationships between nodes that users focus on. Group analysis gives the measures of unbalance of a signed graph over time.
